The snom UC Edition IP business phone range gets Microsoft qualification as fully interoperable with Lync Server 2013 at the inaugural Lync Conference 2013.

"snom has a long history of leadership with Lync interoperability," snom COO Michael Knieling says. "We were the first SIP phones qualified for Microsoft Office Communications Server 2007 Release 2 (OCS R2) and Lync 2010, so we're excited to continue our unique partnership as Microsoft upgrades to Lync 2013."

Seen at the conference is the expanded snom standards-based endpoint portfolio-- including the snom 710, 720 and 760 IP phones from the UC Edition family, as well as the snom 821, 370 and 300 IP phones.
