MindBoard Magic is a surface-independent device which turns a wall or any hard or soft surface into an interactive area, especially for large audiences with interactive multi-touch and multi-write.

MindBoard Magic works with any type of projector, short or long range. It features easy and intuitive calibration that takes less than two minutes to be fully operational.

As a portable solution, MindBoard Magic can be placed on any projector or anywhere, since you have a good frame for the interactive space. This solution hopes to eliminate the need for large, complicated and expensive devices.

It weighs, as a complete solution, around 0.3 kg and comes with USB key, carrying case, 2 infrared pens, and 2 years warranty.
