

The global unified communications as a service (UCaaS) market is poised for staggering growth, and will be worth US\$37.85 billion by 2022, finds **Transparency Market Research's** latest report.

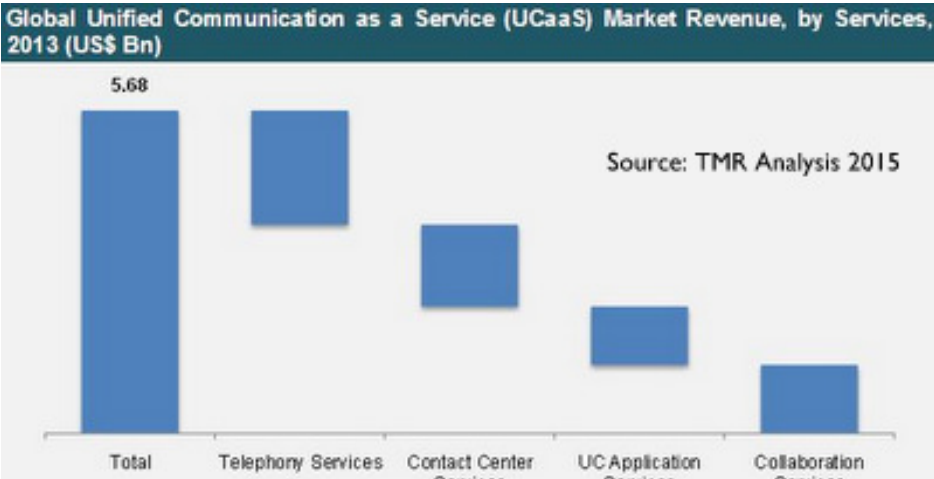

The market will expand at a CAGR of 23.4% between 2014 and 2022 (starting with its 2013 valuation of US\$5.68 billion).

The report published by TMR is titled, **Unified Communication as a Service Market - Global Industry Analysis, Size, Share, Growth, Trends and Forecast 2014 – 2022**. The report studies in detail markets for both hosted and unified UCaaS solutions.

For the most part, growth in the global UCaaS market will stem from the percolation of the bring-your-own-device (BYOD) and enterprise mobility culture. More people are joining the mobile workforce, which increases their dependence on smartphones and tablets. Although large enterprises are familiar with the advantages offered by UCaaS, there is still an awareness gap that exists in the small and medium businesses space.

UC as a Service: US\$37.85 billion by 2022
