

Jabra Unveils UC Headsets

Written by Alice Marshall
10 April 2020

Jabra announces the Evolve2 range of UC headsets with the Evolve2 85, Evolve2 65 and Evolve2 40, all aimed at the collaboration market and designed to work with all leading UC platforms, with Microsoft Teams certification pending.

The Evolve2 range integrates with software/monitoring vendors to allow IT directors and other decision makers to analyse the performance of each Jabra headset. They also identify the root cause of poor call quality, be it due to the wifi router, UC infrastructure or individual headset settings. Jabra Xpress software enables headset management, allowing for firmware updates and new feature implementation.

The Evolve 2 85 is a purely digital headset the company claims delivers 50% better noise cancellation via Digital Hybrid ANC and memory foam noise isolating ear cushions. Voice performance promises 40% better-transmitted audio and double the voice distractor performance, focusing on the voice of the user while canceling distracting sounds through 10 microphones ensuring both voice clarity and ANC, even in the noisiest environments.

The products in the range feature 360-degree visibility of the signature Jabra busy light on each ear cup to signal concentration while working autonomously. Additionally, the wireless headsets can be connected to all mobile devices, with the Jabra Sound+ app allowing users to personalise settings. The Evolve 2 85 and 65 include the Jabra Link 380, a Bluetooth dongle available in either USB-C or USB-A version.

The Microsoft Teams variants have a dedicated Teams button allowing instant connection to colleagues and meetings. The status indicator LED on the headset signals different alerts, such as missed calls or a new voicemail.

The Evolve2 range is available now.
