

iMege: World's Smallest Mini Dome

Written by Bob Snyder
14 August 2012

Followed by the launch of the N3211E, the world's smallest 2 megapixel IR IP dome, iMege will showcase at an upcoming security show the latest Ultra Mini Series with B3210E full-function mini box, G3211E water-proof IR bullet, N3211E palm-size IR dome. The design and features make them suited solutions for small business applications.

iMege N3211E is an ultra-compact dome camera embedded with PoE module and unique IR lighting board that are more than what you expect from an IP surveillance camera. Measuring only 82.2mm in diameter, this mini dome camera is specially designed with white housing for recessed ceiling mounting.

Additionally, N3211E is equipped with 3.6mm board type lens for wide viewing angle that allows users to recognize much broader range (over 100 degrees) at single sight.
