

MSE Debuts Dante-Enabled IPD-Hub 2

Written by Alice Marshall
21 May 2019

MSE plans to launch the SoundTube Entertainment IPD-Hub 2 at InfoComm 2019-- a DSP amplifier featuring Dante-enabled audio distribution designed for small to medium applications.

The IP-Hub 2 is an IP-based audio distribution alternative to traditional 70V or 100V audio systems. It combines Attero Tech Axiom endpoints with Dante infrastructure to create a complete IP-based system, and features 2-channel DSP amplification with a multitude of power options, including PoE, PoE+, 40W PoE and 24V PX.

Ideal for applications such as restaurants, hospitality and education facilities, the IPD-Hub 2 makes the heart of a complete networked audio system. Local and Dante inputs allow for simplified network control while addressing the network requirements for commercial audio connectivity. The IPD-Hub 2 includes x2 RJ-45, x1 Dante and x1 Axiom input and two-channel speaker out for flexible audio distribution.
