

An SDVoE Module for Crestron Control Systems

Written by Alice Marshall
06 February 2020

The SDVoE Alliance releases an SDVoE module for Crestron control systems making it easy for system designers and installers to deploy SDVoE systems of any size while providing the Crestron user experience.

The SDVoE module works with any 3-series Crestron control processor. It enables video matrix switcher and independent audio routing, as well as advanced SDVoE features such as video wall and multiview. Harnessing the power of the SDVoE API, the single driver works with all SDVoE manufacturer products.

The module is available as a free download from the SDVoE Academy by SDVoE Alliance members and certified SDVOE design partners.
