Luxul announces the XWO-BKT1-- a high performance wireless bridge kit designed to help installers satisfy ever-increasing customer demand for better networks.

The XWO-BKT1 combines dual-band 802.11ac wifi technology with high output power to deliver high throughput 5GHz outdoor bridging along with 2.4Ghz coverage. The kit consists of 2 outdoor bridging APs and all necessary installation hardware, including PoE injectors, mounting brackets and water resistant cable glands.

The APs can be used for either point-to-point or point-to-multipoint bridging, while a rugged IP-65 rated water resistant design offers flexible pole or wall mounting options.
