

WiGig Devices Get PlugFest Testing

Written by Marco Attard
10 November 2011

The Wireless Gigabit Alliance (WiGig) announces the first PlugFest event-- where alliance members will test the interoperability of devices using the WiGig standard.

The event runs for 3 days and is organised in collaboration with MET Labs and UL CCS, two leading independent compliance, testing and certification houses, and key test instrumentation provider Agilent Technologies.

The event marks a transition for WiGig-- from technology specification (currently standing at version 1.1) to actual commercial products running the ultra-fast 60Hz standard.

The alliance says WiGig-enabled devices will hit the market at around either late 2012 or early 2013.
