---

The Vuzix M100 smart glasses get a version of a 3rd SAP enterprise application-- specifically AR Operator Rounds, an application enabling the workforce to conduct hands-free operator rounds and inspections.

AR Operator Rounds supports features including communications with beacons allowing equipment ID and improved indoor navigation, equipment readings and measurements directly into the Smart Glasses, over the shoulder remote support and full voice control, all with hands-free operation.

It joins SAP's AR Warehouse Picker and AR Service Technician mobile apps.

"We have been working closely with SAP to develop applications for the industrial user to increase productivity and efficiency for the enterprise market and we are pleased that SAP continues to roll out new applications that support our smart glasses," Vuzix says. "Our products are aimed at helping our customers simplify their work flow, and drive growth and ROI for their business."
