Motorola's New Mobile Computing Entry

Written by Marco Attard
07 April 2011

The MC75A RFID contactless mobile computer has the greatest range of features from a Motorola device of its class yet, able to handle field and mobile capability required for secure payment transactions.

It carries 3.5G mobile connections, 2-way radio, barcode scanner and an HF RFID reader/writer for NFC contactless communications (supports Mifare, Felica and Calypso), as well as a 3.2MP digital camera and GPS.

Security is not a problem, thanks to FIPS 140-2 certification (supporting the most advanced encryption and authentication protocols) and VPNs, for compliance with PCI and HIPAA. Mobile device management comes through Motorola's MSP software.
