The Microsoft Inspire partner conference has Kensington announce a dock accessory allowing customers to turn the Surface Pro tablet into a miniature [Surface Studio](#) complete with articulating hinge and multiple display support.

Dubbed the SD7000 Dual 4K Surface Pro Docking Station, the dock is described as the "the ultimate docking solution for Surface Pro." It uses the Surface Connector to add x4 USB ports, x1 ethernet port, x1 USB-C, x1 HDMI and x1 DisplayPort, as well as provide power to the tablet and all connected accessories.

Through the dock, customers can connect and power up to x2 4K display. The articulating hinge allows easy positioning of the Surface upright as a display or at a drafting table angle, and a magnetic connection holds the Surface Pen stylus in place. As for enterprise customers, a companion Lock Module secures the Surface Pro when docked to prevent theft.
