

Citrix Workspace Arrives on Samsung Devices

Written by Alice Marshall
17 August 2018

Citrix extends its partnership with Samsung-- the latest DeX-enabled devices from the S. Korean company, namely the Galaxy Tab S4 and Galaxy Note 9, now can access the latest version of Citrix Workspace.

The partnership comes complete with a commitment to day-one support for any device and platform, and allows Samsung device users to access virtual apps and desktops, mobile and SaaS apps and data securely, while seamlessly moving between mobile devices, laptops and workstations.

Workspace gives user secure, single sign-on (SSO) to all applications, including widely-used apps such as Salesforce and Workday, as well as integration of 3rd party apps such as Slack. Meanwhile admins get Citrix Unified Endpoint Management, a single platform solution to securely manage enterprise applications, desktops and data from a secure digital perimeter.

"By integrating Citrix Workspace with the new Samsung DeX-enabled phones and tablets, we're not only expanding the unified experience of SaaS, web, mobile, and virtual apps to any device, but also helping organizations transform their employee and customer experiences to be mobile-first," Citrix says. "Combined with Citrix Unified Endpoint Management, customers can securely manage Samsung devices along with all their corporate-issued or BYO devices."
