

Asus Tablet for Enterprise

Written by Marco Attard
15 September 2011

The Eee Slate B121 is the tablet aiming for SMBs-- at least according to Asus.

It carries an Intel Core i5-470M processor and Windows 7 Professional, providing a familiar PC environment in slim tablet format.

Security is also covered-- being Computrace LJack ready (subscription required) and a trusted platform module (TPM) storing cryptographic information (like encryption keys) on a separate chip.

The LED-backlit multitouch display is 12.1" with 1280x800 resolution, while Asus also provides an included Bluetooth keyboard and an integrated Wacom Digitizer stylus.

Connectivity options include x2 USB 2.0 ports, mini HDMI and card reader (SD/MMC with SDHC/SDXC).
