Cayin's Fanless Digital Signage Players

Written by Bob Snyder
21 March 2010

Cayin Technology recently showed their fanless media players, SMP-WEB4 and SMP-PRO4.

A fanless web-based digital signage player, SMP-WEB4 can present multimedia content created by web languages, such as HTML, JavaScript and Flash. It can extend to integrate with databases, web servers (RSS, weather, etc) and HID compliance touch panels. During the exhibition, SMP-WEB4 was demo'd with iPhone.

A fanless zone-type digital signage player, SMP-PRO4 can present up to six zones in a multimedia mix consisting of video, music, image slide show, ticker and clock both in landscape and portrait display. It also comes packed with templates and stylish clocks for instant deployment.

SMP-WEB4 and SMP-PRO4 are both equipped with scheduling and powerful managerial functions via network. With the Cayin Skin Editor, users can now create templates for both SMP-WEB and SMP-PRO series within an instant. These two players also support AV-in and clone mode, showing identical content on two screens via VGA and DVI connectors.
