12 November 2010

Minicom Digital Signage (MDS) and its partner GnosySoft win the Viscom digital signage best practice awards 2010 for their project at Larnaca international airport, Cyprus.

The project consists of a network of over 350 displays in 8 different venues. It provides HD media and display control through MDS' Vision 3000 transmission units.

MDS says this solution uses significantly less electricity and cabling, thus reducing infrastructure requirements and costs.
