The Just Add Power 2G+4+ is a 1U rack-mountable video tiling processor able to display 4 or more HDMI sources on a single screen (or multiple single screens) at 1080p in an array of viewing modes.

First seen at CEDIA Expo 2015, the 2G+4+ displays a single source device full screen, 4 sources in quad view or 4 sources arranged as one large tile with 3 smaller tiles positioned horizontally or vertically along the bottom or side. Installers can implement in any scenario demanding HDMI video matrixing and multi-view/video tiling in tandem, in any size.

Ideal for both video wall and conference room applications, the 2G+4+ can be distributed to and accessed on all TVs through integration alongside an HDMI over IP matrix consisting of a 2nd generation (2G/2G+/2G+AVPro) Just Add Power IP-based transmitters and receivers plus a Layer 3 gigabit managed switch.
