Peerless-AV announces the Smart City Kiosk (KOP2549-XHB, KOP2555-XHB)-- an all-weather-rated solution for sharing community information travel and weather details, as well as wayfinding, advertising and entertainment.

The Smart City Kiosk contains an Xtreme High Bright Outdoor Display (in 49-, 55- or 65-inch) and an optional 10-point IR touch overlay. It is fully sealed, with no air conditioning or fans required in the display enclosure. A PermaFlo filter and cooling fans protect the media storage area, preventing entry of water or dust. Peerless-AV says it withstands winds up to 140 mph.

The design is curved and modular, and can be installed without the need for cranes or forklifts. Customers can customise the kiosk with paint colours for the legs, roof and base, leg design shape, touch overlay, camera and more.
