

ARK-DS220, the OPS Compliant Media Player

Written by Bob Snyder
03 January 2012

At ISE, Advantech will present its latest digital signage technology including Intel Open Pluggable Specification (OPS) compliant media players, ION2 based advanced graphics digital signage platforms, scenario touch computers and more. They can be applied in various applications such as kiosk, POS, medical, home automation etc.

The highlight will be ARK-DS220 the OPS compliant digital signage media player powered by an Intel Atom D525 dual-core processor (fan-based) and Intel Atom N455 single-core processor (fanless) with integrated NVIDIA GT218 (ION2) graphic module for Full HD playback. Compliant with the Open Pluggable Specification (OPS) as implemented in Philips and NEC public displays, its slot-in module design effectively lowers deployment and field maintenance costs.
