First in this line, the 23" MultiSync EX231W (with slim designs and W-LED backlighting) aims NEC Display Solution's EX series at the corporate market.

A USB port allows camera connection for videoconferencing needs. The monitor also has digital inputs, display port and DV-I.

Various ergonomic features include height and pivot functions.

A 'human sensor' puts the monitor into standby mode when the user moves away. Coupled with an ambient light sensor this increases energy efficiency.

NEC says the monitors adhere to its "Green Vision" campaign.
