In USA, Epson introduces two EX Pro series projectors, delivering high brightness and advanced connectivity options, including built-in wireless projection (available on EX7235 Pro only) and Mobile High-Definition Link (MHL) support.

The EX7235 Pro and EX7230 Pro are designed for meeting rooms with ambient light and deliver WXGA resolution for widescreen HD presentations, 3000 lumens of color light output and 3000 lumens of white light output, and a simple setup suite to ensure flexible placement in virtually any room.

The EX7235 Pro includes a Wi-Fi module and a new quick connect on-screen QR code feature for easy wireless setup.

To present wirelessly from mobile devices, users can take advantage of Epson's free iProjection app.

In addition, both the EX7235 Pro and EX7230 Pro include an HDMI port, which supports MHL, to display content from MHL-enabled smartphones and tablets.
