

Orion Launches Plasma Video Wall for Rental

Written by Bob Snyder
22 February 2011

At ISE for the first time, “the grandfather of videowall manufacturers” Orion debuted its 7th-generation Infinite Plasma OPM-4260 at ISE 2011. The 42” display offers increased brightness and contrast and a smaller seam gap over the previous generation, less than 2mm according to the company.

Designed for rental, the Infinite Plasma OPM-4260R has the same specs as the OPM-4260 model, but has a thin metal trim along the side of the glass to protect the display when being taken in and out of flight cases. It has a seam size of 3.5 mm and now has VGA, DVI and composite video inputs.
