21 July 2017

BenQ adds to its Interactive Flat Panel (IFP) lineup with the RP654K, RP704K and RP750K, all featuring native 4K (3840 x 2160) resolution LCD flat panels and 20-point touch capability.

As one might work out from the naming, the RP654K is the 65-inch option, RP704K is 70-inch and RP750K is 75-inch. All include a pen tray and promise fast, smooth response, even with multiple users. Input is similar to tablets or smartphones, with IR technology via either the pen or touch gestures to zoom, click and rotate objects.

The tempered glass over the screen is covered with a bacteria-resistant nano-silver coating to reduce the spread of germs. Eye-Care features include anti-glare glass to minimise light reflections and improve readability, as well as low blue light and ZeroFlicker backlight technologies to reduce eye fatigue.

DisplayNote technology allows participants to stream content and collaborate, while the InstaQShare app provides seamless wireless streaming and mirroring of digital content from smartphones, tablets and laptops. The IFPs are powered with the Android OS, and include a suite of apps and games. These include the WPS Office document reader, web browser, media player and EZWrite digital blackboard annotation tool.

The included NFC pen allows easy setup of different colours and text sizes. A "BenQ Suggest" feature recommends useful apps and simplifies downloads, while admins get BenQ Multiple Display Administrator software for remote monitoring and control of all displays, as well as administration of equipment performance and status alerts for IT staff.

The RP654K, RP704K and RP750K are shipping now.
