Samsung unveils the Flip digital flipchart display (WM55H) at a First Look event-- a 55-inch portrait-based LCD touchscreen allowing for sharing, annotation, movement and even sharing.

Standing on a portable, wheel-based stand, the Flip transforms any location into a huddle room, making it ideal for customers with limited conference space. It allows up to 4 different participants to show content or annotate directly on screen at the same time, using either fingers or dual-sided pen.

Compatibility with a variety of devices is included via wireless and USB, PC and mobile connectivity. Integrated screen-sharing makes Flip content available on connected PCs, smartphones and tablets, without interruption or reduced visual quality, and users can likewise export content from their devices to the Flip display.

Flip users get access to up to 20 pages of writing space, writh embedded search functionalities available to instantly direct participants to specific content. This continuous, rolling stream avoids lost time and interruptions resulting in participants having to search through multiple sheets of paper or notes to locate a specific detail.

The display is customisable, and can be used in either portrait or landscape orientations. The stand is height-adjustable, and should customers need a centralised, roundtable-style discussion the Flip can be removed from the stand connected to a compatible wall mount.
