NEC Display Solutions Europe starts shipping the InfinityBoard-- an all-in-one meeting room touchscreen designed for presentations, brainstorming, reviewing, videoconferencing and collaboration.

Available in 65- or 84-inch sizes, the InfinityBoard includes a 120-degree wide angle Huddly videoconferencing camera, 40W conferencing speakers and a modular OPS slot-in PC. The modular design integrates with Microsoft Windows 10 IoT Enterprise, and is based on the ultra-high definition (UHD) NEC MultiSync InGlass Touch displays.

The display is customisable, and comes complete with passive stylus pens and Mosaic Hub, a real-time collaborative workspace. Mosaic Hub combines video and voice with the ability for teams in different locations to collaborate on documents, text, images and sketches in the same expandable workscpace.

The InfinityBoard will be on show at ISE 2018.
