

The PrimeView Fusion Projector Replacement

Written by Alice Marshall
30 November 2018

Primeview claims the creation of a new display category with the Fusion Max Display (FSNM)-- a line of stand-alone displays aimed at replacing projectors in a room.

The line consists of a series of 1920 x 1080 resolution bezel-free LEDs in 110-, 138-, 165- and 220-inch sizes, all aimed at auditoriums, theatres, rental, classrooms and ProAV meeting rooms. The building block of the series is the Fusion Line, front-serviceable fan-less cabinets from 1.2, 1.5, 1.9 and 2.5mm LEDs.

All Fusion LEDs come standard with 3-in-1 integrated board design (power, receiving card and bridge-board), 100000 hour rating, 160/160 wide viewing angles, pedestal or wall mountable framing accessories and optional multi-touch capability. In Q1 2019 Primeview plans to release UHD 4K versions of Fusion Max.
