ISE 2020 Debut for Leddura 2Share Pro Collaboration Board

Written by Alice Marshall
10 January 2020

CTOUCH announces the ISE 2020 launch of an addition to the BRIX family of collaboration boards-- the Leddura 2Share Pro, an interactive whiteboard complete with built-in wireless content sharing.

Like most with most collaboration devices, users can share content on the Leddura 2Share Pro using either the company app or a web browser and on-screen code. The board also features an integrated Barco ClickShare receiver, allowing users to share content using any ClickShare button. The display handles 3840x2160 resolution, and includes integrated 80W JBL speakers and far-field microphones with echo-cancellation technology.

The Leddura 2Share Pro allows for both finger- or pen-touch writing, with text recognition and conversion. Another feature is a form of digital sticky notes to help with ideation. The virtual canvas allows for an infinite number of screens for collaboration by simply swiping left or right. A final interesting feature is the capability to book a meeting room or check room availability on-screen.
