

CTOUCH Intros Riva Interactive Whiteboard

Written by Frederick Douglas
07 May 2020

CTOUCH debuts the Riva-- an interactive whiteboard aimed at education and SMBs featuring TrueBeam Touch technology, specified at a 1.5ms response time, -1mm touch accuracy and 32 touchpoints.

Using Triple S Glass, CTOUCH claims the display makes the writing experience feel more like writing on paper than on a screen while blocking palm writing. Two integrated JBL three-way speakers (tweeter, midrange and woofer) provide a surround sound-like experience. The CTOUCH Riva Operating System (COSTM) is based on Android 8, and includes splitscreen, control-your-display settings and even the ability to lock down the Android OS from the user.

The Riva is almost OS-agnostic (Android, Linux or Windows, but not Mac). An "eye protection mode" automatically dims the display while users are writing on it, and puts the brightness level back up to the default setting once they are done. An EShare feature allows users to push content from the display to any device on the room, so long they are running on Android, Windows, Mac and Chrome.

CTOUCH adds the Riva comes with an A/A+ energy label and a circularity passport. It also compiles to ISO 9001 and 14001 standards, and automatically turns on and off when users enter and leave the room. Customers can secure the Riva with either a personal NFC reader card or fingerprint, or ensure maximum security with both options.
