

Mounting Enables Desktop Productivity

Written by Bob Snyder

Do you have your heart set on mounting THREE screens on your desktop? Don't worry. Peerless-AV now adds 13 new models to its Desktop Range for monitors and tablets-- and they have the Triple Screen Desktop LCD Mount LCT-103 in their range.

Both size and number of screens on desktops is increasing across EMEA, and for good reason. The research that ties productivity to the size and number of screens available to the desktop has been known for some time.

Microsoft said it first, *University of Utah* researched it to prove it, *The New York Times* discussed it,
Apple
applauded it and
Jon Peddie Research
confirmed it.

You can confidently tell your customers: **Larger screens, more screens help your customers work better. Dual monitors alone can improve your productivity up to 50%.**

Of course, it's mounting that enables you to get more screen or multiple screens on desktops.

Mounting Enables Desktop Productivity

And that why Peerless-AV calls itself “the Number One enabler of desktop productivity”.

Mounting a screen or tablet also frees up vital real estate on desktops. It provides maximum ergonomic comfort to relieve the strain on eyes, neck and back.

Peerless-AV gives integrators and installers more ways to **mount the customer’s choice of any number of monitor and tablets in any office, hospital, or hospitality setting**. All models are ergonomically designed for optimum screen placement and many include features such as smooth motion articulating arms for the easiest height, depth and tilt adjustment contributing to reduced eye and neck strain.

Their models are capable of supporting **up to 4 screens on a single mount**. Installation is easy, securing a display with a quick release mechanism, whilst many models include internal cable management for a clean, uncluttered appearance.

Take the LCT620AD, for example. For 12" to 30" Flat Panel Displays, it offers two desk assemblies in one box, with both desk clamp and grommet supplied for the desk mounting solution the user prefers.

With LCT620AD dual display mount and its flexible articulating arms, you can easily set the height of the display into a comfortable viewing position. A quick release mechanism instantly secures the display. Raise or lower the displays, extend out, tilt forward and back, pan and rotate for portrait and landscape viewing.

For 20" to 30" flat panel displays, the Quad-Monitor Desktop & Grommet Mounts LCZ-4F430B and LCZ-4F4G30B support four 30" displays on a 35.4" (900mm) crossbar, giving more “screen power” as well as more workspace.
