You might have seen or heard about the transparent displays (22"/46") Hyundai brought to ISE 2012, but probably you missed the new D558FL (55" large public display).

With nearly seamless bezels (only 5.5 mm- - two displays side-by-side) and the integrated video wall function, the D558FL is designed for video wall installations.

Hyundai IT also showed its interactive whiteboard-- a large LCD display with touch function dedicated to a variety of educational settings, like classrooms. In combo with a PC and special software, this provides interactive functions controlled by finger, pen, stylus or similar devices.
