Peerless-AV supports the popular trend for short throw projectors with a new range of short throw projector mounts (**PSTA** models and **PSTK** mounts).

How important are short throw projector mounts? Pacific Media Associates has released their findings on the current use and future purchase intentions of organizational projector users. Says Dr. William Coggshall, President of PMA. "Respondents showed a high interest in short-throw projection, and 40% of future fixed projector purchases are expected to include mounting for a short-throw projector."

The Peerless-AV PSTA and PSTK models are designed for both education and corporate applications where the ease of set-up and simple fine adjustment are preferred.

Both the PSTA models and PSTK models come in three different lengths to cover all short throw projectors, including ultra-short throw versions.

The adjustable, telescopic arm in a lightweight aluminum alloy enables the three PSTA models in the range to accommodate projector throw distances from 425mm up to 1.6m, with a lock-down slot to ensure that, once positioned, the projector is fixed in place.

An integrated cable management channel within the arm effectively conceals and protects all cables and connections, while the included PRS projector mount makes image alignment easy with **three-axis adjustment** of tilt, swivel and roll.

With PSTK models, you also get a wall plate with 10"(254mm) of lateral shift and 6" (152mm) of horizontal lift.
