# Christie Shows 70" HD Display Wall Cube

Written by Bob Snyder
18 June 2012

Christie's new **Entero LED 70" video wall display cube system**, shown at InfoComm, is an LED stackable display in a 16:9 form factor that features snap-in service panels, an improved mirror alignment system for precise mirror/geometry control and improved cosmetic features (it looks better).

And, since it's LED, there are no lamps to replace, no moving parts and no consumables to change out, so it's perfect for NOCs.

Designed with less than a 1-millimeter gap between the image and the edge, stacking creates a seamless video wall.
