

Optoma Enters-6000 Lumen Projector Market

Written by Bob Snyder
18 June 2012

At InfoComm in USA, Optoma introduced a 6000 ANSI lumen **TW865-3D**, a 3D projector with interchangeable lenses designed for large venue applications and auditoriums.

Claiming to be the only DLP projector in its class with a center lens design and 360-degree operation, the TW865-3D comes pre-calibrated for specific settings, including classroom, presentation and DICOM.

Users have a choice of three optional lenses (standard, short throw and long throw), and motorized zoom and focus also allow installers to optimize projector placement for best projection results.
