Fujitsu launches an addition to the ScanSnap series-- the ScanSnap iX500 scanner with built-in wifi connectivity allowing "PC-less" scanning to Android and iOS mobile devices.

Also compatible with Mac OS and Windows PCs via USB 3.0, the iX500 takes a "scan-to-everywhere" approach with easy scanning to cloud-based storage services such as Evernote, Google Docs, Dropbox, SugarSync and Salesforce.

The scanners appears on Windows PCs as a "ScanSnap Folder," essentially a Windows folder one can open from any program or web application.

A built-in GI processor creates pdf files at up to 25 double-sided colour pages per minute (300dpi, colour) while "Separation Roller" technology maximises feeding reliability across a wide range of documents and paper sizes.

After scanning the fully customisable Quick Menu provides the ideal application for the user's needs.
