

Fujitsu Claims "New Standard" in Scanners

Written by Marco Attard
07 November 2013

Fujitsu launches the fi-7180/fi-7280 and fi-7160/fi-7260 document scanners- a scanner series the company claims provide "a comprehensive approach to document scanning."

All scanners feature the PaperStream IP driver and PaperStream Capture image enhancement software, allowing for compact and clear digital images from a wide range of document types. The models capture up to 80 sheets/160 pages per minute (A4, colour, double-sided, 300dpi), putting them among the fastest scanners aimed at knowledge worker desktops.

Fujitsu offers four different models-- the fi-7160 and fi-7180 ADF scanners and the fi-7260 and fi-7280 flatbed options.

"We have optimised the capture process so that users can now integrate important information into downstream document-management processes more quickly and without the need for special training," the company says.
