Ingram Micro commits itself to the 3D printing market as it opens a European 3D printing and scanning division and plans to provide resellers with support and training via new European center of competence.

Leading the division is Rudolf Ehrmanntraut, senior manager of 3D printing and scanning for Europe.

"We have seen a frenzy of activity in the 3D printing and scanning space in Europe, with our resellers making it clear that they are looking to enter or expand in this fast-growing market," Ehrmanntraut says. "We are pleased we are able to provide resellers with the needed support to get them fully operational in offering 3D printing and scanning products and support services-- going much further than just providing hardware."

Ingram offers 3D printing products from OEMs including 3D Systems, Leapfrog and RepRap, covering all segments of the industry. It also pllans to expand its offerings and competencies further.
