OKI Europe adds a wide-format printer to the ColorPainter series-- the E-64s, a 64-inch wide format printer equipped with the same ColorPainter technology as the M-64s and H3-104s.

The E-64s uses high-pigment ECO solvent ink to deliver optimum levels of colour for both indoor and outdoor applications at all print speeds. The company promises results are impressive whether printing on back- or front-lit materials, technical textiles, wallpaper, canvas, hard PVC, banner, vinyl and many other types of media.

An optional ioniser supports high quality print output when printing indoors, while user-friendly construction and functionality ensures easy printer management and handling from preparation to operation.

“The ColorPainter E-64s is a remarkable printer offering print businesses affordable entry to very profitable, high-precision, wide-format printing on a large spectrum of media which may have previously been unattainable” the company says. “As an advanced and extremely versatile printer, packed with functionality, it successfully meets all the requirements in a field where commercial opportunities are expanding but must be seized quickly and effectively in order to maximise revenue.”

The E-64s is shipping now in a package complete with take-up unit, ONYX RIP Center and 2-year warranty including print heads (with no nozzle shot or production restrictions).
