

A Monochrome Workforce Printer From Epson

Written by Frederick Douglas
06 June 2019

Epson announces the Workforce Enterprise WF-M20590-- an A3 multifunction network printer offering monochrome printing at 100 ISO ppm, allowing it to meet the print volume demands of SMB and corporate customers.

The WF-M20590 features Epson PrecisionCore line-head technology to deliver high-volume monochrome printing while using up to 50% less power compared to traditional mono laser printers. It offers a maximum paper capacity of 5350 sheets, as well as an optional finisher for stacking and stapling. Control comes via 9-inch touchscreen, and the printer supports direct scan to email or the cloud.

The paper trays support sheets up to 13- x 19-inch, while a dual-head single pass scanner simultaneously scans both sides of a 2-sided document up to 11 ipm. In addition, Epson claims the high-capacity cartridges provide up to 60000 pages before a first ink replacement is required, all without need for warm-up time.

The WF-M20590 ships on June 2019.
