Chief launches of a line of flexible monitor arms for a variety of workstation applications. The stylish Kontour Series of desk and wall arms provide flexibility for ergonomic positioning and a host of features.

Designed with a forged aluminum body and holding monitors weighing up to 18.14 kg (40 lbs), the Kontour Series comes with mounting options that allow installers to choose between desk and wall mounts with varying extension up to 61 cm (24").

Advanced models also include Extreme Centris with -10° to +75° of fingertip tilt that lends itself well to sit-to-stand workstation applications. A cable management system conceals cables beneath hinged channel covers in the K1 Series. Easy Access loops keep cables tidy in the K2 Series.

"We've always had the most functional and installer-friendly mounts—now we've given them a face-lift via forged arms for strength with sleek lines for a beautiful look," says Eric Wickberg, Sales Director for Chief's Display Solutions Team. "We've also streamlined our costs to make them even more value-driven. Our new Extreme Centris takes our effortless pitch-adjust to a whole new level. Plus, we've kept all our great installation benefits and modular design intact."

All Kontour Series monitor mounts are designed to UL specifications and are backed with a 10-year warranty.
