

Extron's Interactive Wayfinding Interface

Written by Dylan Card
20 August 2020

Extron announces availability of the **TLSI 201, an interactive Wayfinding Interface** that provides real-time meeting space availability, status, and location information using a centralized display.

Designed to connect directly with **Extron Room Scheduling panels**, the Interactive Wayfinding Interface enables users to easily locate and book meeting spaces and make ad hoc meeting reservations.

You configure the TLSI 201 interface using free **Extron Room Agent software** to view and book meeting spaces for the current day or week. Easy-to-navigate room information can be viewed in list or map view layouts, allowing users to quickly see and book meeting spaces.

The Interactive Wayfinding Interface offers several customization options, including logo branding and personalized messaging, as well as light and dark color themes. Flexible, distinct information fields can be turned on or off as needed. The scaled output supports signal resolutions up to 1080p, making it a plus for 40" or larger touch screen displays.

The TLSI 201 features the convenience of PoE.
