Lexmark expands the GO Line series with 6 single- and multi-function printers designed to bring "enterprise-level" durability, reliability, security and features in a smaller, lower-cost devices aimed at SMB customers.

Additions include two colour single-function printers, the C3224dw and C3326dw, three colour multi-function devices (MFPs), the MC3224dwe, MC3224adwe and MC3326adwe, and a monochrome MFP, the MB2236adwe. Lexmark says the colour printers are up to 30% smaller and lighter compared to predecessor products from the company. Wifi connectivity is standard, together with enhanced connectivity and support for mobile devices. All printers carry multicore processing and the same full-spectrum security as enterprise-class Lexmark devices.

A one-piece toner cartridge combines imaging components with Unison toner, making them easily removable and recyclable. The colour devices print up to 24 or 26 colour pages per minute, while the mono device prints up to 26 pages per minute. The MFPs include a 2.8-inch touchscreen.

Enterprise customers also get a pair of Lexmark colour printers-- the CS331dw single function printer and the CX331adwe MFP, both featuring colour output at up to 26 pages per minute, high-yield replacement toner cartridges and connectivity via wifi, USB and ethernet.

All the above mentioned printers are available now.
